## Contents

Simulate landscape patterns . . . . .	1
Re-do analysis for reindeer GPS points . . . . .	1

## Simulate landscape patterns

- Implement function to calculate distance through GRASS
- Implement function to calculate density through GRASS, using `r.mfilter` and `r.resamp.filter`
- Implement exp decay distance
- Calculate distance between points
- Set a reasonable set of landscapes to tell a history: from random to clustered, plus regular
- Simulate points and check correlation
- See best form to represent this (using `dist_points`, or `ZOI`, or what)

## Re-do analysis for reindeer GPS points

- Ana, Anna
- github `set_points`
